

Broadband over the power line is a BAD idea! It has not worked in several other areas of the world, it will fail here also. First, there is the problem of interference to other modes of communications, such as on the HF frequencies. Second, there is no provision for security. Any hacker will be able to "tune into" what is carried over the power lines across tens of thousands of back yards! There are much better options to this BAD idea! Let's find a better, more secure, less intrusive option than this one!
